

Bona SuperSport Deep Clean

Technical data sheet

Professional
Floor Care

Designed for occasional cleaning of indoor sports floors to remove black heel marks, handball glue as well as build-up of body fats and other contaminants that may make the surface slippery.

- Degreases floor and restores slip resistance
- Removes syntetic materials from shoe soles and the like
- Removes certain types of handball glue

Technical data

pH-value:	Concentrate approx. 12,5 Use solution: 11
Dilution:	1 litre to 5 litres of water (16,7%)
Safety:	Irritating, see safety data sheet for more information.
Shelf life:	At least 2 years, from the date of production, in unopened original container
Storage / transport:	Store frost free.
Pack size:	3 x 5 litres (44 boxes per pallet)

Preparation

Remove loose dust/grit etc using a vacuum cleaner, scissor mop or other dry cleaning methods.

Application

Apply the diluted product to a section of the floor using a mop or spray equipment. Allow the solution 3-5 minutes to dissolve the dirt. Scrub the section using a buffing machine or an autoscrubber equipped with a white or red pad and remove all the dissolved dirt. Once the entire floor has been cleaned, make another pass with the autoscrubber using only clean water in the tank, to ensure no cleaning residues remain.

Note: Keep the amount of water used to clean to a minimum. Pay attention to large gaps in the floor, do not allow excessive amounts of cleaning solution to seep into open gaps.

Recommendations for Handball Glue

If handball glue is frequently used, plan for deep cleaning weekly as hardened handball glue will be more difficult to remove. Bona recommends using Select Profcare Handball Resin at the court. This handball glue has proven to be appreciated among players yet is easier to remove than traditional types of handball glue (source: Team Denmark).

Large spills of hardened material may need to be removed mechanically using a spatula or similar. Be careful not to damage the floor.

The standard dilution (1:5) is usually effective enough on the handball glue. For greater efficiency, the concentration can be increased to 1:2 (1 litre cleaner to 2 litres of water).

Apply the solution to the affected area using a mop or spray equipment. Allow the solution 3-5 minutes to dissolve the dirt. Scrub the section using a buffing machine

Bona SuperSport Deep Clean

Technical data sheet

(e.g. Bona FlexiSand) equipped with a red pad. Without delay, remove the dissolved dirt with an autoscrubber or mop and bucket with clean water, before moving on to the next section.

As always, keep the amount of water used to clean to a minimum. Pay attention to large gaps in the floor, do not allow excessive amounts of cleaning solution to seep into open gaps.

After using Bona SuperSport Deep Clean at high concentration it is recommended that the floor is allowed minimum 2-3 hours drying time before resuming use.
